### Practice Set-1

Q.no	Question	Mapped CO
a.	Design a DFA which accepts set of strings containing exactly four 1's in every string over $\Sigma=\{0,1\}$ .	
b.	Giv DFA accepting the following language over $\Sigma=\{0,1\}$ <ul style="list-style-type: none"> <li>i) Number of 1's is multiple of 3.</li> <li>ii) Number of 1's is not multiple of 3.</li> <li>iii) Containing either substring '000' or '111'</li> <li>iv) All the strings that end with 11 and contain 101 as substring.</li> </ul>	[CO1]
c.	Determine an NFA accepting all strings over $\{0,1\}$ which end with 1 but does not contain the substring 00. Also calculate equivalent DFA	[CO1]
d.	Find an NFA with four states for $L=\{a^n; n \geq 0\} \cup \{b^n a; n \geq 1\}$ . Also calculate equivalent DFA.	[CO1]
e.	Design an NFA with no more than 5 states for the set $L=\{abab^n; n \geq 0\} \cup \{aba^n; n \geq 0\}$ .	[CO1]
f.	<b>Design the DFA that accepts an even number of a's and even number of b's.</b>	[CO1]
g.	Consider the DFA given below and identify the L accepted by the machine <div align="center">  </div>	[CO1]
h.	(i) Convert the NFA- $\epsilon$ to DFA. <div align="center">  </div> <p>ii) Check with the comparison method for testing equivalence of two FA given</p>	[CO1]

	below.	
		
i.	<p>Minimize the automata given below</p> 	[CO1]
j.	<p>Compute the epsilon- closure for the given NFA. Convert it into DFA</p> 	[CO1]
